

ENBALA Power is Seeking Ontario Candidates for IESO Smart Grid Pilot Program

Toronto, ON – June 29, 2010 – ENBALA Power is seeking municipal and industrial partners in Ontario for participation in the Ontario Independent Electricity System Operator's (IESO) Alternative Technology Regulation Pilot Program.

Successful entrants in the Pilot Program will incur no cost to participate and will be financially rewarded. Participants will also qualify for an ongoing revenue opportunity associated with the program's success.

Ideal candidates have large electric equipment that operates to fulfill a consistent workload with a degree of process flexibility or functional range.

Examples include:

- Water and Wastewater Treatment Systems
- Wood Chipping and/ or Rock Crushing Facilities
- Large Battery Charging Stations
- Electric Boilers
- Chillers / Industrial Cold Storage
- Industrial Ventillation

It is important to note that the primary work function, life cycle and operational costs of participant's equipment will not be negatively impacted by involvement in the Smart Grid network and the IESO Pilot Program.

In concert with the Ontario Clean Water Agency (OCWA) and the Ministry of Environment's efforts to promote energy smart innovations across the province, Sempa and OCWA have agreed to work together to qualify water and wastewater systems into this program.

"The Province of Ontario is very active in driving positive change in clean energy and water services. As a crown agency, OCWA immediately recognized the potential of working with ENBALA on the IESO System Regulation project" said OCWA President & CEO, Robin Kind. "We are confident that a successful demonstration project will lead to economic and environmental benefits for the people of Ontario."

At no cost to the candidate, ENBALA's Smart Grid Team will assess each applicant's operational assets and determine the level of income they can earn from participation.

Interested parties are encouraged to visit: www.enbala.com to learn more about this Request for Expression of Interest.

About ENBALA Power Networks

Originally established in 2003 as Sempa Power Systems, ENBALA operates a Smart Grid services network that creates mutually beneficial links between large users of electricity and their regional Independent Electricity System Operator or ISO. By connecting to ENBALA, large industrial, commercial and municipal consumers of electricity are financially rewarded for supporting quality and balance within their regional electricity system. For more information, visit www.enbala.com.

About Ontario Clean Water Agency

The Ontario Clean Water Agency (OCWA) provides safe, reliable and cost-effective clean water services to municipalities, First Nations communities, institutions and businesses. OCWA's core business is the operation, maintenance and management (OM&M) of water and wastewater treatment facilities and their associated distribution and collection systems. OCWA also provides a wide range of professional project management, advisory and training services. Visit www.ocwa.com.
